Charvis Jones
Team 7
Design Sprint Day 2

Goal:

The goal of our application is to help connect individuals with their desired job. We plan to create a vast database of employers that are hiring and supply them to our application users. We plan to also have definitive features that will make the usability of PathFinder excellent.
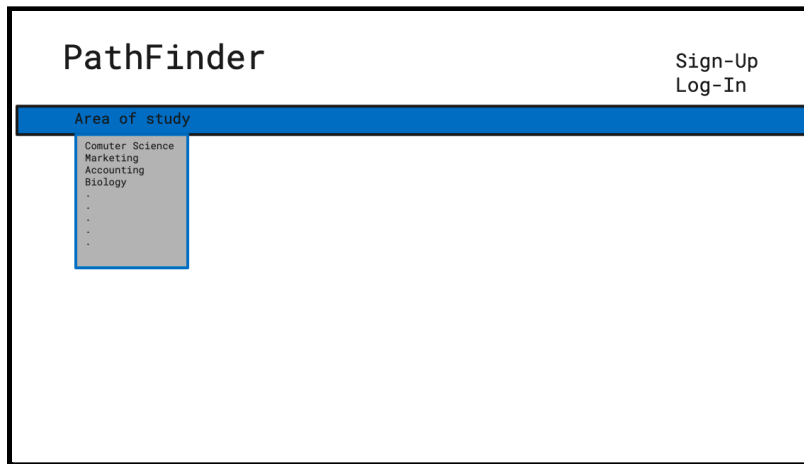

Feature List:

- ★ Job/internship search and filter feature
- ★ Job/internship applying feature
- ★ In-depth job description feature
- ★ LinkedIn account linking feature
- ★ Resume & interview tips/advice list feature
- ★ Resume prep and workshop feature
- ★ Personal profile feature
- ★ Area of Study Drop Down
- ★ Location input
- ★ Database for job requirements
- ★ Secondary database for general requirements for job groups
- ★ Students can attach resume to profile
- ★ Experience/level filter
- ★ Job/Internship bookmark system
- ★ Q & A feature
- ★ Save / Favorite Feature

Sketches:

Drop Down

The sketch below is an example of how I envision a drop down menu in the navigation bar to allow users to select their area of study. This will help users filter down some of the employers.

```
PathFinder                                    Sign-Up
                                              Log-In
   Area of study

   Comuter Science
   Marketing
   Accounting
   Biology
   .
   .
   .
   .
```

Save/Favorite

The sketch below is an example of how users will be able to save their favorite jobs or employers they are interested in. The red arrow points to the star, by clicking on the star users can save that job to their profile.

```
PathFinder                                    Sign-Up
                                              Log-In
   Area of study

   DATA ANALYST     ☆
   - MICROSOFT
```

Apply From Here

The sketch below shows how users will be able to apply from our site instead of having to go to the employers website to apply. By clicking the big red button "APPLY NOW" users will be brought to the application.
